

The Integra Dashboard provides a powerful data extraction and data presentation tool for Executives, Company Management and their Staffs.

The Dashboard leverages the power and functionality of the Integra Query Manager with a graphical presentation layer that provides you configurable data presentation options to allow you to control the organization and look of your dashboard displays.

The Dashboard makes available any data from the Integra Energy Management System Database via an easy to configure Presentation Manager and leverages the power of the Integra Query Manager to provide periodic and/or up to the moment results in graphical or tabular form.

Features and Benefits

User Login & Data Security

Integra Query Manager Integration
Supports Query Data Selectors
Supports Query Parameter Prompts
Supports Query Date Selectors
Query data from multiple Corporations
Query Any Integra Data
Summary or Detail Data Views
Configurable Data Refresh Rates
Supports Shared Server Queries

Tabbed Presentation Manager
User Configurable Layouts
Multiple Chart Types
Tabular/Scrollable Data Views
Static Data Form Views
Multiple Dashboards per User
Multiple Dashboards per Session
Controlled Access to Dashboards

Integrated into Integra Menu
Supports Multiple Query Datasets
Support Queries and Sub-Queries

Overview

Integra's Dashboard component allows Executives, Company Management and their Staff to view any data from the Integra Energy Management System Database via a powerful and configurable data Presentation Manager. Your data may be viewed in Graphical or Tabular form.

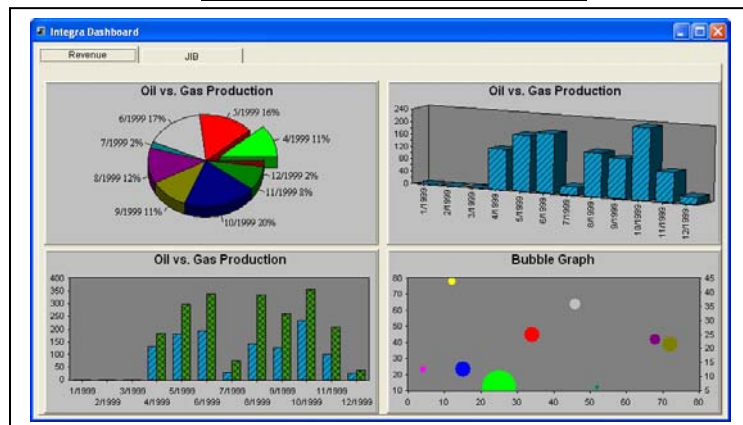

The Dashboard Presentation Layer provides for charting your data and supports the following chart types: Pie, Area, Horizontal or Vertical Bar, Stacked Bar, Point, Line and more. In addition to the various chart styles the Dashboard Manager also provides Tabular and Static Panel displays. or both Charts and Tabular Displays of the same data. Using Tabbed Dialogs, the Dashboard Manager allows you to configure up to eight Tabs for organizing your data displays by functional area such as: Cash/Treasury, Financials, Payables, Production, Land/Leases, Etc.

For example, the Integra Dashboard allows you to retrieve and monitor key Integra indicators such as Cash Balances, Payable or Receivable Balances or Detail Account data. By leveraging the power and functionality of the Integra Query Manager, you are able to extract any data in Summary or Detail form and use the Dashboard Presentation layer to provide you comprehensive and timely views of that data via dynamic query updates.

The Dashboard Data Query Layer allows you to specify user defined queries via the Integra Query Manager that will dynamically refresh the data for your dashboards. Queries can be accessed from multiple Dashboards so that the same data can be viewed in a different presentation layout. Data Selection parameters can be stored in the Dashboard, prompted for on Dashboard execution or changed while the Dashboard is running.

Integrated Security insures that only those users with authority to view Dashboards and Query Data can do so.
