

The Integra Report Writer and Charting feature allows authorized users to create, store and execute user defined Reports and Charts from Integra Query Manager result datasets from any data in the Integra Database.

The Query Manager's Report Writer and Charting integration allows users to create both Summary and Detail Printed Reports and can seamlessly incorporate powerful Charting of you data with point and click ease of use.

Features and Benefits

- Query Manager Integration
- Multiple Result Datasets
- Multiple Reports per Dataset
- Detail Row Level Reporting
- Summary Level Reporting
- Easy Page Layout Controls
- Columnar Report Writer Layout
- Column & Page Layout Preview
- User-Defined Sub-Total Levels
- Multiple Aggregate Functions
- Multiple Chart Types
- Multiple Data Series Charts
- Detail Row Level Charting
- Summary Multiple Level Charting
- Report & Chart Preview
- Charts Only Feature
- Point & Click Ease of Use
- Save and Execute Reports/Charts
- User Level Security

Overview

The Integra Report Writer and Charting tool integrates seamlessly with the Integra Query Manager. This integration allows you to create multiple Reports and/or Charts on each of the Query Manager's multiple result datasets and allows a single Query to return multiple (detail and/or summary) datasets and provides you the ability to create multiple Reports and/or Charts on each of those result datasets.

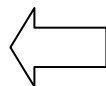

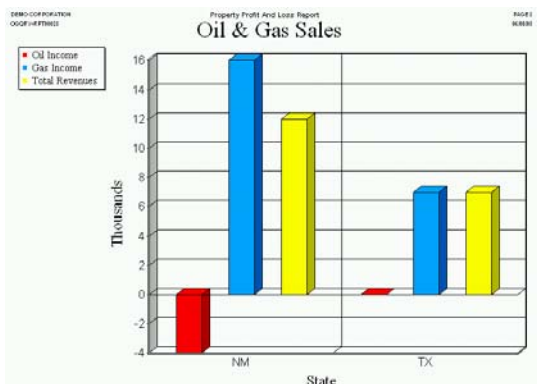

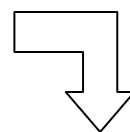

The Integra Report Writer is a column-oriented reporting tool that simplifies the layout of your report and is easily useable by a broad range of users. You simply chose the columns of data from your Query and select the order of columns from left to right across the page. Various Report Criteria properties allow you to control page width and orientation (landscape or portrait) with point and click ease. Report Column properties allow you to control Column Headings, Formatting and Sub-Totaling.

The Charting capabilities are impressive with multiple Chart Types (Pie, Bar, Line, etc.) supported with point and click ease. Creating a series of individual Charts for a large set of data is now as easy as setting a few Chart properties. No longer do you need to manually highlight or cut and paste individual data rows to create charts individually via Excel or other Charting tools; Detail and Summary level Charts can all be generated seamlessly during the reporting process via Integra. Integra Charting supports multiple Data Series and multiple user selectable Sub-Total Charting levels.

With the ease of use and minimal learning curve of the Integra Query, Reporting and Charting Tools, we believe that most companies will find that 80 to 90 percent of your users will be able to create 90+ percent of the user-defined reports and charts that they need from the system.

The Integra Report Writer supports print options with the ability to print to Integra's native VPE viewer or publish Reports and Charts as industry standard PDF documents.
