Electronic Data Exchange

The Integra Energy Management System provides several eCommerce features for electronic payment processing and supports a variety of Electronic Data Exchange (EDI) interfaces. These powerful data management tools are deployed as Application Modules and as embedded features of Application Modules. These feature address the growing needs for Data Interchange in the Petroleum Industry and enhance the scalability of Integra's Applications.

Overview of Features

The following is a list of some of the major eCommerce and Data Interchange features in Integra. The list is not all-inclusive but covers many of the most common areas of interests as related to our petroleum industry clients:
